

JOIN THE
METRO FAMILY

Meet Metro

Metro Aviation was incorporated in 1982 as a helicopter charter, flight training and maintenance operation. Today, we are the largest air medical completion center in the world and the second largest traditional air medical provider.

Metro operates more than 130 air medical helicopters and airplanes from coast to coast across the United States, and employs nearly 1,000 aviation professionals.

A History of Firsts

Metro Aviation was the first air medical provider to equip its entire helicopter fleet with Night Vision Goggles (NVG's). All pilots receive annual simulator training and all technicians receive annual maintenance training. We were among the first to reach Level IV of the FAA's Safety Management System (SMS) Pilot Program for Part 135, and the first Part 145 certificate holder to reach Level IV.

We joined with FlightSafety International to create the world's first Level D, full-motion flight simulator for the EC135, and in 2014 began the process for the world's first Level D, full-motion flight simulator for the EC145.

The Metro Aviation Family

Metro Aviation operates aircraft from Spokane to Washington, D.C. and everywhere in between. Metro's fleet currently consists of:

BK117
EC145
EC135
BO105
AS350
Bell 407GX

King Air 200
Pilatus PC12
Citation Encore
Citation CJ1
Lear 75

Training

Pilots receive annual aircraft specific, scenario-based simulator training, as well as training for human factors and decision making, crew resource management, crew coordination, Instrument Flight Rules (IFR) and Inadvertent Instrument Meteorological Conditions (IIMC). The Helicopter Flight Training Center at Metro Aviation is equipped with an EC135 Level-D Full Motion Simulator, AS350 Level-7 Flight Training Device, 407 Level-7 Flight Training Device and will soon house an EC145 Level-D Full Motion Simulator. In addition, the training center has a dedicated maintenance classroom and a CommLab, a revolutionary simulation experience for communication specialists.
